

Tethr It Now sessions do not require the end user to download or install an application, but since the platform is browser based there are permissions that must be enabled on the device to use the microphone and camera. A successful Tethr It Now session requires the use of both functions.

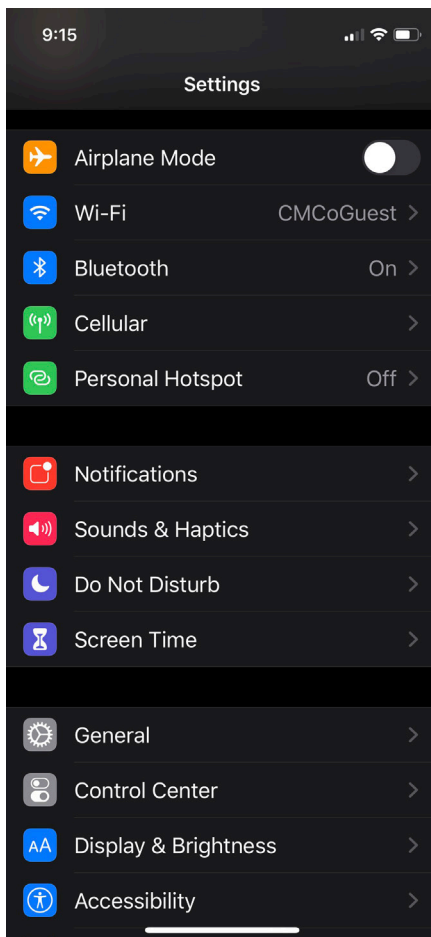

4 Easy Steps:

1. Go To **SETTINGS**
2. Scroll to **SAFARI**
3. Select **CAMERA**
4. Ensure **ALLOW** or **ASK** is selected.
(Follow the same steps above for microphone except in step 3 select **MICROPHONE**.)

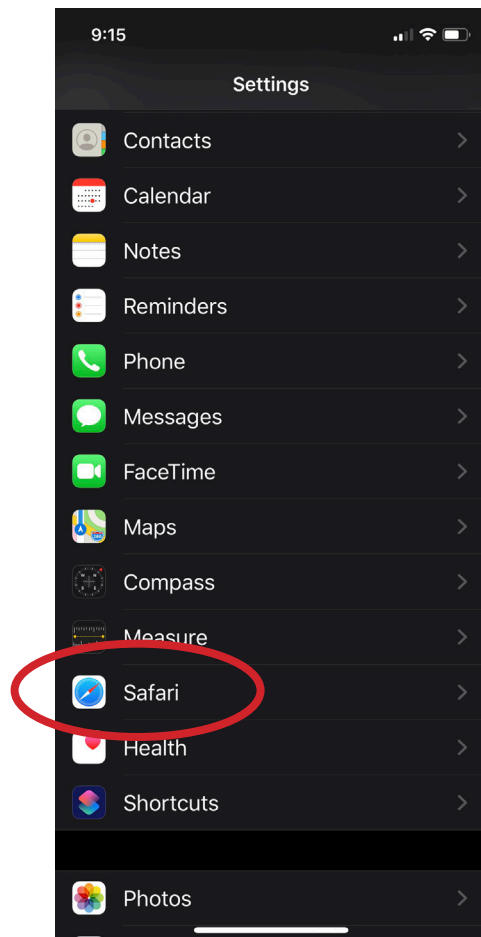

Apple Devices (Safari)

The following steps will show you how to ensure your iPhone or iPad's Safari settings are properly configured to have a successful Tethr It Now session.

1. On the iOS device go to **SETTINGS**.

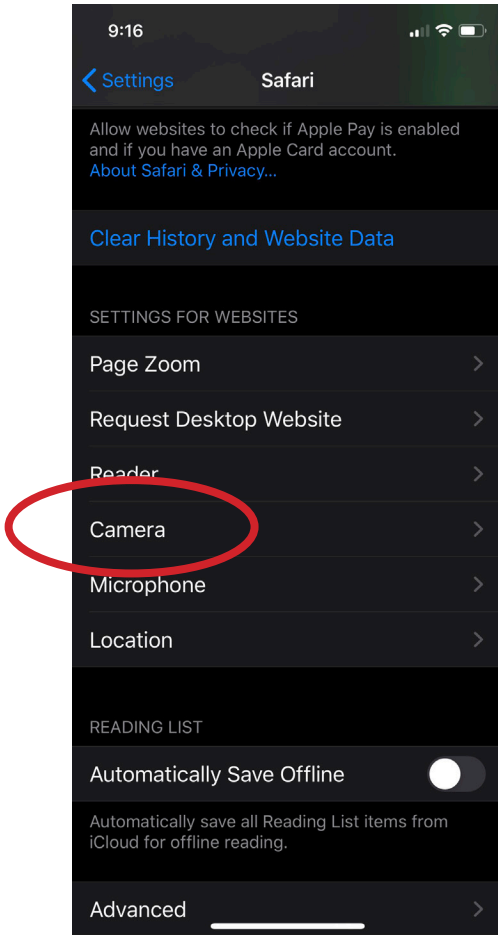

2. Scroll down until you see **SAFARI**.

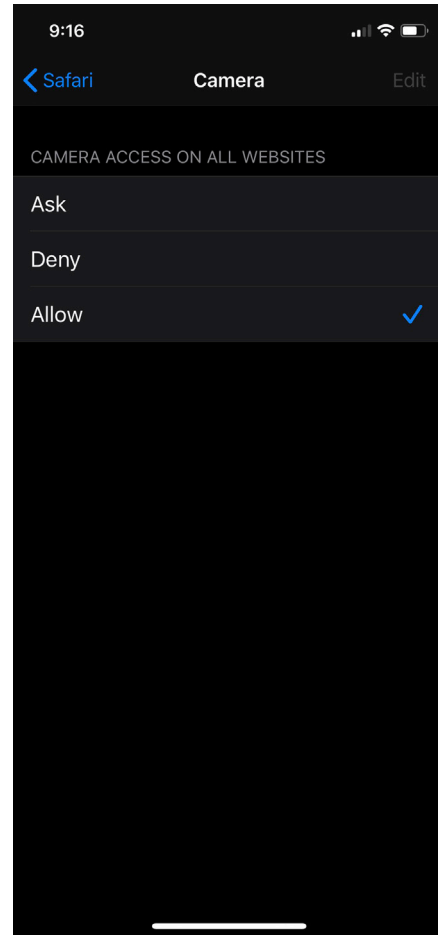

(Continued on next page)

3. Scroll down until you see **CAMERA**.

4. Be sure either **ASK** or **ALLOW** is selected.

If ASK is activated, each time a session is initiated the end user will be prompted to allow the use of the camera before video is displayed. If ALLOW is activated, the video will start automatically without being asked. Note: If DENY is selected, video will not be allowed.

***Follow the same steps for the microphone (Audio) by selecting MICROPHONE (right below CAMERA in the Safari settings).**
